DNA encoding tumour necrosis factor receptor-associated factor binding

Homo sapiens.

```
The present sequence represents a TRAF2 binding protein, which is encoded by clone 15. Clone 15 is a partial clone, which lacks most of its 5' end of the coding DNA sequence. A cDNA library prepared from B-cells was cornened for proteins that associate with TRAF2, and clone 15 was carded as associate with TRAF2, and clone 15 was caids 222-501 of TRAF2. The TRAF-2 binding proteins can be used for modulation or mediation in cells of the activity of NF-kappas or any content intracellular signalling activity modulated or mediated by TRAF2. TARF-binding proteins are especially used for prevention or treatment of pathological conditions associated with NF-KB induction, e.g. acute pathological conditions associated with NF-KB induction, e.g. acute comparities, autoimmune-induced cell death, e.g. death of the beta langerhans cells or the panceas that results in diabetes, the death of langerhans cells or the death of oligodendrocytes in the brain in cells in graft rejection, the death of oligodendrocytes in the brain in proliferation of the AIDS virus and hence the AIDS disease. The proteins are also useful for screening of ligands capable of binding to a protein, which are useful for modulating cellular activity modulated/mediated by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  148 VKGLDSYEEKEDKVIKEMAAQIREVEQSRQEVVRSVLEPQAVPDPEEGSSAPRSWKGMNS 207
                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel polypeptide sharing one or more homologous amino acid domains with the legless (1gs) protein, a downstream component of the Wnt/Wingless (Mnt/Wg) signaling pathway involved in the formation and maintenance of spatial arrangements and proliferation of tissues during development, and in the formation and growth of many human tumours. The products of the invention has eyestatic activity and can be used to treat cellular disorders, blood disorders and cancers caused by over-stimulation of the Wnt pathway, where the cancerous condition is colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer. The product could also be used to promote tissue regeneration and repair. This sequence represents the human legless (1gs) protein homologue higs-1 described in the disclosure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     88 REHLSHGNLTVLYGGLLEHLASPEHKKATNKFWWENKAEVQMKEKFLVTPQDYARFKKSM

The invention relates to a polypeptide sharing one or more homologous amino acid domains with a Legless (Lgs) protein and is therefore a functional homologue of Lgs. The invention also relates to a nucleotide eccentrate corganisms, the nucleotide sequence encoding a protein present in invertebrate and/or vertebrate corganisms, the nucleotide sequence encoding a protein comprising a constitute function in a regulatory pathway and the use of the polypeptide from the isolation of Lgs-binding proteins by carrying out an assay chosen from an in vitro binding assay with such a peptide or a coformannest two hybrid assay. The polypeptide and polymucleotide are useful for treating disorders of cell fate, which involves are useful for treating disorders of cell fate, which involves are useful for treating disorders of resquents, antibodies, antibody fragments, 1gs antisense DNA, 1gs antisense RNA, 1gs double-stranded RNA, correlated to cell differentiation or cell proliferation. The compound are related to cell differentiation or cell proliferation. The compound are related to cell differentiation or cell proliferation. The compound for malignant state. The cancerous condition to a neoplastic or malignant state. The cancerous condition is characterised by overmalignant state. The cancerous condition is characterised by overmalignant replace to present a maniation of the Wnt pathway and is medulloblastoms or cancer of the colon, breast, head and neck, brain, thyroid or skin. The therspeutic compound may also be administered to a blood disease to promote tissue compound and repair. This sequence represents a human Lgs/Bc19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 2; SEQ ID NO 17; 62pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          partial polypeptide of the invention.

                                                                                                                                                                                                          RESULT
                                                                                                                                                                                                                                                                                                            용
                                                                                                                         셤
                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel legless (1gs) proteins and polynucleotides encoding such proteins. Lgs sequences are useful for the treatment of disorders of cell fate such as differentiation or proliferation. The invention is used to treat blood disease or a cancerous condition characterised by over-stimulation of the Wnt pathway such as colon, breast, head and neck, brain, thyroid, medulloblastoma or skin cancer and is administered to prevent progression from a pre-neoplastic or non-malignant condition to a neoplastic or malignant state. It is administered to promote tissue regeneration and repair. The invention is also useful in the therapy of diseases cost by an over-activation of Wg pathway. It is useful for reducing 1gs gene expression in an invertebrate or vertebrate organism or an invertebrate or vertebrate cell line. The invention is also useful in gene therapy. The present sequence is human 1gs-1 protein used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -----RTLKSGAFPPQ--TPEAHPQ 1021

                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used
                                                                                                                                                                                                                                     1022 ARCLCAFRRGALKPEPPGRTLKLGVPPHTTRKARPHAAKTSP-----RPRCTRQAP--- 1072

in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal continuity of (II) or to treat disease states involving (II). (II) is secrivity of (II) or to treat disease states involving (II). (II) is considered in the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of

                                         sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The

reaction (PCR) primers, oligomers, and for chromosome and gene mapping, reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II) The polymotectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal critisty of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and its binding partners are useful in medical imaging polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. The invention provides polynucleotides (AAX60579-X60687) encoding specific secreted human proteins (AAY16779-Y16787). The nucleic acid specific secreted human proteins (AAY16779-Y16787). The nucleic acid sequences are deposited under the accession number AFTC 98880. The polynucleotides are used as tissue markers, chromosomal tags, for diagnosis of genetic diseases, to generate anti-protein or anti-DNA antibiodies, also as nutritional sources and supplements and in gene therapy. The secreted proteins are useful therapeutically, in human or vectrinary medicine, e.g. for modulating cell proliferation or therapy. The secreted proteins are useful therapeutically, in human or vectrinary medicine, e.g. for modulating cell proliferation or infections, autoimmune disease, organ rejection, or to induce tumour immunity), as regulators of heemicopolesis (e.g. for treating anemia or inconjunction with tumour therapy), to stimulate growth of tissue for owund healing, as fertility control agents, for regulating encounted the memobalitic and thrombolytic agents (e.g. in treatment of heemophilia or infarctions), as antimicrobial agents, for modifying biorhythms, are appetite, or metabolism, as analgesics and many other uses. The proteins are also used to raise antibodies, used as diagnostic immunoassay reagents also (when neutralizing) for treating e.g. cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     201 SWKGMNSQVASSLQQPSNLDLPPAPELDWMETGPSLTFIGHQDIPGVGNIHSGATPPWMI 260

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                              AAX54951 to AAX64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
c supplement the patients own production of (I). Additionally, (I)
c polynucleotides may be used to produce the secreted (I), by inserting the
nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
c ancers and cancer metastases of haematopoietic antigen genomic
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK849492 to AAK84950 and AAM82169
represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                     Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         238 FIGH---QDIPGVGNIHSGATPPWMIQDEEYIAGNQEIGPSYEEFLKEKEKQKLKKLPPD 294

The invention relates to human polymuclectides and the polypeptides they encode. The polymuclectides can be used to express recombinant proteins for analysis. Characterisation or therapeutic use, as markers for tissues in which the corresponding protein is expressed, as markers for tissues in which the corresponding protein is expressed as molecular weight markers on Southern gels, as chromosome markers or tags to identify chromosomes or to map related gene positions, to compare with endogenous DNA sequences in patients to identify potential genetic disorders, as probes to hybridise and discover novel related DNA sequences, as a source of information to derive PCR primers for genetic fingerprinting, to raise anti-protein antibodies and in gene therapy. The proteins can be used to raise antibodies or to elicit another immune response, as reagents in assays designed to quantitatively determine levels of the protein in perferentially expressed and to treat autoimmune disorders (e.g. multiple sclerosis, systemic lupus erythematosus, insulin dependent disorders mellitus or graft-versus-host disease), anaemias, periodontal diseases, bone fractures, cartilage damage, central nervous system classes or parkinson's disease) and cancers. The proteins and polymucleotides are also useful as nutritions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polypeptides and polynucleotides having biological activities, useful as nutritional sources or supplements, or for treating e.g. autoimmune diseases, cancers, bone fractures or damages, or central nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          or supplements, e.g. as carbon, nitrogen or carbohydrate sources. This sequence represents a human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                              Evans C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 104;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequence (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA aequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention provides M. hyopneumoniae polypeptides and nucleic acids AD128668-AD128627, including C28-MPH545, as well as vectors and host cells. Compositions containing M. hyopneumoniae polypeptides and nucleic acids are provided for use in methods of treating pigs to prevent enzootic pneumonia. Diagnostic tests for detecting M. hyopneumoniae infection in swine herds are also provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        313 SFGPRLEXWTPLA----VQTSTPKLKLQQXRSS----HIQKKANHALYQLPXGXKPKST 363

```
The present invention relates to novel proteins (I) referred to as NOVX, where X is any number from 1 to 18, and their coding sequences (III). The proteins and their coding sequences are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder such as metabolic disorders, diabetes, obesity, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), neurodegenerative disorders, Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Padigaru M, Alsobrook JP, Colman SD, Spytek KA, Boldog F; Vernet CAM, Li L, Shenoy S, Casman S, Guo X, Edinger S; Macdougall J, Malyankar U, Parturajan M, Shinkets RA, Pena C; Tchernev V, Zerhusen BD, Millett I, Miller C, Lepley DM, Smithson G; Baumgartner J, Herrman J, Peyman JA, Gorman L, Mezes P, Kekuda R; Taupier RJ, Gerlach V, Grosse WM, Liu X, Ellerman K, Rothenberg M;

This invention relates to novel nucleic acid molecules encoding NOVX to polypeptides selected from NOV1 to NOV11 inclusive, as well as variants thereof. Specifically, it refers to vectors, host cells, antibodies, agonists, antagonists and recombinant methods for producing proteins cancluding GPCRs, secretory proteins and dual specificity phosphatases. The present invention describes these proteins as useful for the development of compositions that can be used to treat neurodegenerative diseases such as Alzheimer's and Huntington's, inflammatory conditions including Crohn's disease and rheumarcid arthritis, as well as including Crohn's disease and rheumarcid arthritis, as well as including crohn's disease and rheumarcid arthritis, as well as altopecia, bulina, cancer and manic depression, hypotension, anxiety, allopecia, bulina, cancer and manic depression. As such, they exhibit various activities including vulnerary, virucide, antibacterial, analgesic, neuroprotective, nootropic, cerebroprotective, anticonvulsant, dermatological, osteopathic, antialerary, virucide, antialleraric, hypotensive, cardiant, hypertensive, antiulcer, antialleraric, antiallargic, human NOVX protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                New NOVX polypeptides useful for treating cancers, blood disorders, asthma, psoriasis, vascular disorders, hypertension, viral, bacterial or parasitic infections, allergy, renal disorders and skin disorders.
                                                                                                                                                                                                            Burgess CE, Casman SJ, Colman S, Edinger S;
